Wrench Wise AI Delivery Intelligence Platform Manual

The Wrench Wise Delivery Intelligence Platform optimizes logistics routing and real-time package deliv

Our proprietary routing engine, known as RouteOptima, leverages graph neural networks and A* heuri

The dispatch interval for autonomous delivery fleets is configured at exactly 120 seconds.

The core microservices communicate via gRPC over HTTP/2 with an average latency of 4.2 millisecon

Data ingestion handles up to 50,000 telemetry events per second from delivery fleet vehicles.

Security, Authentication, and Infrastructure SLA

All API communications require TLS 1.3 encryption with AES-256-GCM cipher suites.

Service authentication is enforced using JSON Web Tokens (JWT) signed with RSA-4096 private keys

The token expiration duration is strictly 60 minutes for student lab workspaces.

Our system provides a 99.95% uptime SLA for premium enterprise delivery tiers.

In the event of a cluster failover, cross-region replication restores state within 15 seconds.
